

Hi,

I'm Mikaela, a Toronto-based Front-End Developer and recent graduate of HackerYou's Web Development Immersive Bootcamp. I learned about your open Web Developer job through your visit to HackerYou on Friday, and I am very excited to be reaching out to apply for it.

At HackerYou, I learned how to build accessible websites and applications using JavaScript and React. Through working on projects, I learned that I love anticipating how users will interact with my application, and I look forward to building applications that will help companies and industries grow. I'm adventurous by nature, and I embrace learning every day. I can't wait to learn new tools and technologies both on the job and on my own. My current skills include:

- JavaScript fundamentals, jQuery, using APIs and Gulp
- React
- Firebase
- HTML5, CSS3, Sass and responsive design
- Git, GitHub and Command Line
- Paired programming & working in teams

I'm not new to working in small and large teams. Through my work experience, I've gained problem solving skills and attention to detail while developing strong relationships with clients, colleagues and executives at all levels. Mostly, it provided me the ability to think creatively, learn quickly, demonstrate initiative and clearly communicate my ideas to others in a fast-paced environment. At the end of the day, I'm really good at figuring out what needs to be done and I'll always get it done with a smile on my face. All skills that I know will translate well to working in a dynamic environment like the one at Resolver.

I'd love to hear from you and have the opportunity to explore if this role would be a good mutual fit. If that's something you'd be interested in too, I'd love to hear from you!

Thanks,

Mikaela
